The ice has decreased.

**Western Baltic Sea**

In Flensburg open water. On the inner Schlei there is thin very open ice and further out open water. Very open new ice in Neustadt harbour. At Wismar open thin ice in the port and very open to close new ice to Timmendorf. At Rostock there is from open new ice on the Unterwarnow to open water in the sea channel of Warnemünde. In the Bodden waters south of Darß and Zingst there is 5-15 cm thick fast ice in places and new ice.

**Southern Baltic Sea**

West of Hiddensee there is open water. In the northern approach to Stralsund and east of Hiddensee there is 5-10 cm thick close to compact ice and new ice. In the port of Stralsund there is 5-10cm thick compact ice, further out in the eastern approach to Stralsund there is very open 5-10cm thick ice to Palmer Ort, then close 10-15cm thick ice to Freesendorfer Haken and very open new ice at Osttief. In the Greifswalder Bodden there is about 20 cm thick compact ice at Lauterbach and very close 2-15 cm thick, ridged ice, is present in the Dänische Wiek, else there is open thin ice and new ice. On the Peenestrom there is very open to open thin ice and new ice out to Ruden, in sheltered areas there is also 15cm thick compact ice. Kleines Haff is covered by 10-15 cm thick fast ice with open places in the west. In the port of Sassnitz there is very open pancake ice.

**Outlook**

Further ice decrease.

**Restrictions to navigation**

To Stralsund, Wolgast and the harbours in the Greifswalder Bodden only daytime navigation with pilot is allowed.

The northern approach to Stralsund, southern Peenestrom, Kleines Haff and river Peene are closed for navigation.

**Icebreaker:** ARKONA is present in the Greifswalder Bodden.
