

## **German Ice Report - No. 01**

2012-01-30

BB 12010

CC 11000 21000

New ice and thin ice is present in shallow and sheltered coastal areas, in places.

### **Western Baltic Sea**

In the inner Schlei, in the harbours of Eckernförde and Neustadt as well as on the Unterwarnow there is new ice and ice formation. The Bodden waters south of Darß and Zingst are partly covered with up to 5 cm thick ice, on the Zingster Strom there is new ice.

### **Southern Baltic Sea**

On the northern fairway to Stralsund widespread new ice occurs, the sheltered regions are covered by 5-10 cm thick ice. In the southern part of the Greifswalder Bodden there is open to close thin ice in sheltered regions near the coast. On the Peenestrom there is new ice from Peenemünde to Wolgast and south of Wolgast. At the northern coast of the Kleines Haff there is close new ice.

Ice formation will continue and intensify during the second half of this week.
