

**German Ice Report - No. 02**  
2012-12-22

AA 1//// 20//0

New ice and thin ice is present in shallow and sheltered coastal areas, in places.

**Western Baltic Sea**

On the inner Schlei there is open thin ice. The Bodden waters south of Darß and Zingst are partly covered with up to 5 cm thick ice.

**Southern Baltic Sea**

On the northern fairway to Stralsund open to close new ice occurs, the sheltered regions are covered by up to 5 cm thick ice. In the Bodden waters between Hiddensee and Rügen there is close to very close, partly rafted thin ice and shuga, on the fairway open ice is drifting. In the Greifswalder Bodden there is open to close thin ice and new ice in sheltered regions near the coast. Southern Peenestrom is mostly covered with up to 5 cm thick ice. Consolidated thin ice is present along the northern and southern coasts of the Kleines Haff.

Ice formation will continue during the next two days, especially in the eastern inner coastal waters.
