

## **German Ice Report - No. 08**

2013-01-18

New ice is present in inner coastal waters.

### **North Sea**

In the North-Frisian Wadden sea there is open water and new ice in places, at Eiderdamm also close thin ice.

### **Western Baltic Sea**

There is open water and new ice in some sheltered bays and ports. In the Bodden waters south of Darß and Zingst there is open water and new ice, in sheltered regions also compact new ice.

### **Southern Baltic Sea**

In the sheltered bays of the Bodden waters between Hiddensee and Rügen there is open to very close new ice. In the Greifswalder Bodden there is new ice in sheltered regions near the coasts. In the southern Peenestrom there is open to very close new ice. Close to very close thin ice is drifting in places in the Kleines Haff.

### **Outlook**

As temperatures below zero will prevail for the next days new ice formation will continue.

**The next German Ice Report will be issued on Monday.**
