

German Ice Report - No. 01

2014-01-24

AA 11000

BB 11000

New ice and thin ice is present in some harbours as well as in shallow and sheltered coastal waters, in places.

Western Baltic Sea

On the innermost Schlei and in the harbour of Neustadt there is new ice and ice formation. The bodden waters south of Darß and Zingst are partly covered with up to 5 cm thick ice.

Southern Baltic Sea

On the fairway between Stralsund and Palmer Ort there is new ice in sheltered regions. In the bodden waters between Hiddensee and Rügen there is close to very close, up to 5 cm thick ice, on the fairway Schaprode – Hiddensee open new ice occurs. On the coasts of the Bight of Greifswald, open to close new ice and ice formation occurs in sheltered bays. On the northern Peenestrom there is some new ice and ice formation in smaller harbours and in sheltered bays. Southern Peenestrom is mostly covered by up to 5 cm thick ice. New ice is present along the northern and southern coasts of the Kleines Haff.

Ice formation will continue and intensify during the next two days, especially in the eastern inner coastal waters.

Next German Ice Report will be issued on Monday, January, 27th.
