

## **German Ice Report - No. 02**

2014-01-26

AA 13000

BB 12100

New ice and thin ice is present in some harbours as well as in shallow and sheltered coastal waters.

### **Western Baltic Sea**

On the innermost Schlei and on the fairway Kappeln – Schleimünde, in the inner harbour of Kiel, in the harbour of Neustadt, in the sheltered bays of the Wismar Bight, and in the city harbour of Rostock there is thin ice, new ice and ice formation. The bodden waters south of Darß and Zingst are covered with thin ice.

### **Southern Baltic Sea**

The bodden waters between Hiddensee and Rügen, Strelasund, southern Peenestrom, and Kleines Haff are covered with thin ice or new ice. On the coasts of the Bight of Greifswald there is thin ice, new ice and ice formation. On the northern Peenestrom there is thin ice or new ice.

Intensive ice formation in the inner coastal waters will continue for the next 24 hours. Due to snow fall during Monday, light frost and decreasing winds ice formation is possible on the coasts of the Pomeranian Bight, too.
