Bodden waters are covered with thin ice, ice formation in the harbours and inner coastal waters continues.

North Sea

On the North-Frisian coast there is thin ice and new ice, in places. On the East-Frisian coast open water ice occurs at Norderney. In the port of Hamburg there is open to close new ice.

Western Baltic Sea

On the Schlei there is open to close 5-10 cm thick ice. In many harbours there is open to close new ice. On the fairway Lübeck – Travemünde and in the inner Wismar Bight there is close 5-10 cm thick ice. The bodden waters south of Darß and Zingst are covered with 10-15 cm thick ice.

Southern Baltic Sea

The bodden waters between Hiddensee and Rügen are covered with 5-15 cm thick ice. In the port Stralsund and on the fairways to the port there is open to very close thin ice or new ice. In the harbours and along the coasts of the Bight of Greifswald 5-15 cm thick fast ice is present, otherwise shuga, slash and new ice occurs. On the northern Peenestrom and farther out to the island Ruden there is thin ice or new ice. Southern Peenestrom and Kleines Haff are covered with 10-15 cm thick fast ice.

Outlook

Ice increase on the German coasts will slowly continue at light to moderate frost during the next four days.
