There is new and thin ice in some harbours and in shallow and sheltered coastal waters, in places.

North Sea

In the port of Toenning 10 cm thick open ice occurs. The offshore terminals of Eiderdamm are covered by ice, else there is open water. In the Lister Tief there is very open ice with a thickness of less than 15 cm, mostly.

Western Baltic Sea

The Schlei is covered by open 3-4 cm thick ice. In Heiligenhafen there is open water. In the port of Neustadt very open brash ice occurs. The port of Rostock is covered by close 3-5 cm thick new ice, further out towards Warnemünde thin new ice occurs occasionally. The region south of Zingst and Darß is covered by close to very close 10-13 cm level ice. The Bodden between Rügen and Hiddensee is completely covered by 10-30 cm thick consolidated or fast ice.

Southern Baltic Sea

In the Greifswalder Bodden mostly open water occurs, in sheltered areas also close ice. Ice thicknesses lie between 5 cm and 10 cm. The Dänische Wieck and the Greifswalder Wiek are covered by close to very close 12-30 cm thick ice. On the Peene River open 7 cm thick ice occurs. The Peenestrom is completely covered by fast ice, ice thicknesses vary between 10 and 15 cm.

In the Kleines Haff there is very close 12 cm thick fast ice.

Outlook

The ice situation will not change significantly until tomorrow.
