

## **German Ice Report - No. 23**

2018-03-16

AA 12/10 20//0

The remaining ice has accumulated near the southern shores..

### **Southern Baltic Sea**

Between Rügen and Hiddensee open water and thin open, rotten ice occur in few places, else ice free. In the Greifswalder Bodden there is a very narrow belt of compact brash ice at the coast in the southern, else it is mostly ice free. In the German part of the Szczecin Lagoon, open thin ice occurs in the southern parts.

### **Outlook**

The remaining ice will stay near the coast.

### **Restrictions:**

**From 02.03.2018:** Minimum ice class E1 and 1000 kw is needed for the southern Peenestrom and on the Kleines Haff. The night time restriction have been cancelled.
