

**German Ice Report - No. 25**  
2018-03-18

New ice has formed in shallow and sheltered areas.

**North Sea:**

In the area around Sylt open water occurs locally.

**Southern Baltic Sea**

In the Darss-Zingster Bodden Chain new ice has formed locally. Between Rügen and Hiddensee open water and thin open, rotten ice occur in few places, else ice free. In the Greifswalder Bodden there is a very narrow belt of ice at the south-western coast and some new ice has formed at the north-eastern coast, else it is mostly ice free. In the German part of the Szczecin Lagoon, there is a narrow belt of compact ice along the south-western coast.

**Outlook**

There will be light new ice formation in shallow and sheltered areas.
