

Eisbericht Nr. 45

Amtsblatt des BSH

Jahrgang 94	Nr. 45	Wednesday, 17.02.2021	1
-------------	--------	-----------------------	---

Übersicht

In der Bottenwiek liegt in den Schären bis 55 cm dickes Festeis. Weiter außerhalb kommt im Westen 5–15 cm dickes, ebenes Eis vor und im zentralen und östlichen Bereich befindet sich 10–30 cm dickes, sehr dichtes Eis. Norra Kvarken ist mit 10–25 cm dickem Eis bedeckt. In der Bottensee bis hinunter zum Schärenmeer kommt entlang der Küsten ebenes Eis und Neueis vor. Im Finnischen Meerbusen liegt an den Küsten im Norden und Osten bis zu 40 cm dickes Festeis und auf See treibt im Süden östlich von 26° E 10–30 cm dickes, sehr dichtes Eis; ansonsten treibt nördlich von 59°30' N 2–10 cm dickes, dichtes Eis. Im Rigaischen Meerbusen kommt im Norden 10–25 cm dickes Festeis vor und auf See treibt im Norden und Osten dünnes Eis. Weiter südlich kommt bis hin zur westlichen Ostsee in geschützten Bereichen bis 20cm dickes, sehr dichtes Eis oder Festeis vor. An den Küsten des Skagerraks und Kattegats kommt örtlich Neueis vor und in einigen norwegischen Fjorden liegt örtlich bis zu 30 cm dickes Festeis.

Overview

In the Bay of Bothnia, there is up to 55 cm thick fast ice the archipelagos. Farther out, there is 5–10 cm thick level ice in the west and 10–30 cm thick very close ice in the central and eastern part. Norra Kvarken is covered with 10–25 cm thick ice. In the Sea of Bothnia, down to the Archipelago Sea, there is level ice and new ice along the coasts. In the Gulf of Finland, there is up to 40 cm thick fast ice along the eastern and northern coast and 10–30 cm thick very close ice in the south east of 26° E; else there is 2–10 cm thick close ice north of 59°30' N. In the Gulf of Riga, there is 10–25 cm thick fast ice in the north and at sea, there is thin ice in the north and east. Further south, down to the western Baltic, there is up to 20cm thick very close ice or fast ice in sheltered areas. Along the coast of the Skagerrak and Kattegat, there is new ice in places and in some Norwegian fjords, there is up to 30 cm thick fast ice.

Bay of Bothnia

In the northern Bay of Bothnia, there is 30–55 cm thick fast ice in the archipelago. Farther out first a narrow region with 10–25 cm thick very close or compact ice followed by a lead with new ice south of Kemi-3 and Malören. In the western part, there is mostly 5–15 cm thick, partly rafted level ice. In the central and eastern part, there is 10–30 cm

thick, very close rafted ice. Ridges occur in the eastern most part. In the south, there is up to 40 cm thick fast ice along the coasts, and at sea 10–30 cm thick, very close ice in the east, and 5–15 cm thick, level ice in the west. With severe to very severe frost, the ice growth. Some ice drift to the north is expected.

Norra Kvarken

In the archipelago off Vaasa, 10–25 cm thick fast

ice is present out to Norra Glöppsten. Farther out

and off the northern fast ice 10–30 cm thick, very close ice. On the Swedish side, there is 10–40 cm thick fast ice in bays along the coast and northwest of Holmöarna. Else, 2–10 cm thick, partly rafted

Sea of Bothnia

Along the Finnish coast, there is up to 20 cm thick fast and level ice in the archipelago; further out new ice and ice formation. On the Swedish side, there is 5–20 cm level or very close ice in bays and new

Archipelago and Åland Sea

There is 5–20 cm fast ice in the archipelagos of the eastern coast. Mostly thin level ice and new ice stretch out to Åland and past Kökar. At the western

Gulf of Finland

Fast ice is present along the northern and eastern coasts, with a thickness of 10–20 cm in the west, 20–30 cm thickness in the north, the Vyborg Bay and Bjerkesund and 30–40 cm thickness from St. Petersburg up to about Kotlin. Off the fast ice in the east, there is mostly 10–20 cm compact ice out to about 28°E. Further west in the south, there is 5–20 cm thick very close ice to about 26° E and in

Gulf of Riga

Väinameri, is covered with 10–15 cm thick fast ice. There is 10–25 cm thick fast ice in the Pärnu Bay followed by very close ice and Nilas to the southern point of Kihnu and to Heinaste. Further out, there is first close drift ice followed by new ice. In Irbe Strait,

Northern and central Baltic

In the port of Ventspils and on the fairway from Irbe Strait to the port, there is very open light nilas. In Liepaja port, there is very open 10–15 cm thick ice. In the port of Klaipeda, there is very open pack ice. The Curonian Lagoon is covered by 18–25 cm thick fast ice. In Lake Mälaren, there is mostly 5–20 cm

Southern and Western Baltic

There is 17 cm thick fast ice in the Vistula lagoon. In the Polish harbors, there is 1–10 cm thick very open to open ice at Gdansk, Darlowo and Kolobrzeg, and up to 5 cm thick very open to open ice in Gdynia and Utska. There is 10–20 cm thick very close to compact ice in the Stettin lagoon and the port of Stettin. In Swinoujscie port, there is open ice. In the Bay of Pomerania there is up to 10cm thick very open ice at sea. On the Peenestrom there is mostly up to 20 cm thick fast or very close

Skagerrak, Kattegat, Belts and Sound

Thin ice is present in sheltered areas along most of the coasts. In the Norwegian fjords there is up to 30 cm thick fast ice in places. In the Belts and Sound, there is up to 15 cm thick ice in sheltered

level ice. Thin level ice and new ice stretches to about 50 nm southwest of Norrskär. With moderate to severe frost, new ice formation and ice growth is expected. The ice will drift to the north.

ice further out. 30–50 cm thick fast ice is present on Angermanälven. With light to moderate frost, new ice formation is expected.

coast, there is thin level ice in bays. With light to moderate frost new ice formation will occur.

the north, there is 10–15 cm thick very close ice to about 27° E. Else, there is 2–10cm thick close ice north of 59°30' N. New ice is present in the bays along the southern coast from Tallinn bay towards the west. With severe to very severe frost in the east, new ice formation and ice growth are expected.

there is close drift ice. Else, near the coasts there is 10–15cm thick ice in sheltered or shallow areas. In the port of Riga is very open drift ice. With moderate to severe frost, further ice formation is expected.

thick fast ice, with level ice towards the Baltic Proper. Thin level ice and new ice is present along the Swedish coast down to Karlskrona and partly covering Kalmarsund. With light frost in the west and moderate frost in the east, some new ice formation at the eastern coast is expected.

ice. In the Greifswalder Bodden and slightly further out, there is open to very close 5–15 cm thick ice and up to 20 cm thick compact ice in sheltered areas at the coast and in inner regions around Rügen. From Rostock to Flensburg, there are some ice remnants in ports and sheltered areas with up to 10cm thick, close ice at Wismar. With temperatures above the freezing point, ice melt will continue.

areas. With mostly light frost, some ice formation is expected in the northern fjords. Further south, little changes are expected along the Swedish coast and melting in the Belts and Sound.

Swedish Lakes

In Lake Vänern, there is 5-10cm thick fast ice in sheltered bays and thin level ice and new ice along

the coasts. With mostly light frost some new ice formation will occur.

North Sea

Thin ice is present in the Limfjord. In the North Frisian Wadden Sea mostly 2-15cm thick, open ice with some thicker, rafted floes. In the North Frisian ports there is up to 30cm thick, open to very close ice, partly rafted. On the Elbe, there is very open to open thin ice from Hamburg to Brünsbüttel. In the

East Frisian Wadden Sea, there is mostly open water. On Jade, there is very open thin ice. In East Frisian ports, there is very open ice in places. Open water is present on Weser and Ems. Ice melt will continue and some northerly ice drift is expected.

Dr. W.Aldenhoff

Information of the Icebreaker Services

Estonia

Icebreaker: EVA-316 assists in the port of Pärnu. BOTNICA assists in the ports of Kunda and Sillamae.

Finland

Vessels bound for Gulf of Bothnia ports in which assistance restrictions apply, shall when passing latitude 60°00' N report their nationality, name, port of destination, ETA and speed to ICE INFO on VHF channel 78. This report can also be given directly by telephone to +46 10 492 7600.

Vessels bound for a Finnish or Swedish ports in the Quark or in the Bay of Bothnia shall report to Bothnia VTS 20 nautical miles before Nordvalen Lighthouse (63° 32.15' N 20° 46.60' E) on VHF channel 67.

The traffic separation scheme in the Quark is temporarily out of use due to ice conditions.

Ice breaking season has ended in Lake Saimaa and Saimaa Canal. The Saimaa Canal is closed for traffic on 8.2.2021.

Icebreaker: OTSO, POLARIS and KONTIO assist in the Bay of Bothnia. SISU assists in the Quark and in the southern Bay of Bothnia. ZEUS assists in the Quark. VOIMA assists in the eastern Gulf of Finland.

Germany

From 11.02.2021: Only daytime navigation is allowed in the northern approach to Stralsund (including Bodden waters west), eastern approach to Stralsund (from the sea mark „Landtief B“ to the ports of the Bight of Greifswald and to the harbour Stralsund), fairway „Osttief“ and northern Peenestrom, southern Peenestrom, Achterwasser and the Kleines Haff.

Begin and end of daytime navigation can be obtained on VHF: Warnemuende traffic center, Stralsund traffic channel 67 and Wolgast traffic channel 09.

Norway

Tønsberg inner harbour (Tønsberg): Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size. (25.01.21)

Vestfjorden (Tønsberg): Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size. (25.01.21)

Nærøyfjorden: Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size. (09.02.21)

Kilsfjorden (Kragerø): Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size. (15.02.21)

Hellefjorden (Kragerø): Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size. (15.02.21)

Russia

There are restrictions for small crafts going to Vysotsk, Vyborg, St. Petersburg, Ust-Luga and Primorsk.

From 25th of January tow boat-barges will not be assisted to Vyborg. Vessels without ice class may navigate with icebreaker assistance only.

From 25th of January tow boat-barges will not be assisted to Vysotsk. Vessels without ice class may navigate with icebreaker assistance only.

From 28th of January tow boat-barges will not be assisted to Primorsk. Vessels without ice class may navigate with icebreaker assistance only.

From 13th of February tow boat-barges will not be assisted to St. Petersburg.

Icebreaker: Several icebreakers assist vessels to the port of Vyborg, Vysotsk, Primorsk, Ust-Luga and St. Petersburg.

Sweden

The transit traffic west of Holmöarna is temporarily prohibited.

For low powered vessels transit traffic through Kalmarsund is not recommended.

Icebreaker: ATLE, ODEN and FREJ assist in the Bay of Bothnia. YMER assists in the Quark. BALTICA assist in the southern Sea of Bothnia. ALE, DYNAN and SCANDICA assist in the Lake Vänern.
