Übersicht

In der nördlichen Bottenwiek liegt in den Schären 20–35 cm dickes Festeis. Weiter außerhalb treibt im Osten lockeres bis dichtes, 5–30 cm dickes Eis oder Neueis und im Westen Neueis. In der südlichen Bottenwiek und Norra Kvarken liegt in den Schären bis zu 30 cm dickes Festeis. Weiter außerhalb kommt zu meist Neueis vor und auf See treibt in Norra Kvarken lockeres Eis oder Neueis. Entlang der Küsten der Bottensee, dem Schärenmeer und der Ålandsee liegt Festeis oder dünnes ebenes Eis und etwas Treibeis weiter außerhalb in der Bottensee. Im Finnischen Meerbusen liegt entlang der Nordküste und im Osten Festeis. Im östlichen Teil treibt auf See lockeres Eis oder Neueis. Im Rigaischen Meerbusen befindet sich bis zu 25 cm dickes Eis im Moonsund und in der Pärnubucht. Neueis oder dünnes, ebenes Eis kommt in der nördlichen Ostsee, den Haffgebieten der südöstlichen Ostsee und dem Vänern vor. Neueis kommt in geschützten Buchten der zentralen Ostsee und der südlichen Ostsee vor. In einigen inneren Fjorden des Skagerraks liegt Neueis oder Festeis.

Overview

In the northern Bay of Bothnia, there is 20–35 cm thick fast ice in the archipelagos. Further out in the east, there is open to close, 5–30 cm thick drift ice or new ice, and in the west new ice. In the southern Bay of Bothnia and Norra Kvarken, there is up to 30 cm thick fast ice in the archipelagos. Further out, there is mostly new ice and at sea in Norra Kvarken, there is open drift ice or new ice. Along the coasts of the Sea of Bothnia, the Archipelago Sea and Åland Sea, there is fast ice or thin level ice and some drift ice further out in the Sea of Bothnia. In the Gulf of Finland, there is fast ice along the northern coast and in the easternmost part. At sea in the east, there is open ice and new ice. In the Gulf of Riga, there is up to 25 cm thick ice in Moonsund and Pärnu Bay. New ice and thin level ice occurs at places in the northern Baltic, in the lagoons of the southeastern Baltic and Lake Vänern. New ice occurs in sheltered areas of the central Baltic and the southern Baltic. Fast ice or new ice is present in some inner fjords of the Skagerrak.

Bay of Bothnia

In the archipelagos of the northern Bay of Bothnia, there is 20–35 cm thick fast ice, from the Finnish coast reaching out to Hebe and Kattilankalla. Off the fast ice in the east, there is 10–30 cm thick consolidated ice to Kemi-3 and Oulu-3. Further out, there is new ice to approximately the line Kemi-1 – Nahkianinen and 5–30 cm thick, open to close ice to about 23° E. Off the fast ice in the west, there is

first thin level ice and then new ice to Farstugrunden – Norströmsgrund – Simpgrund. In the southern Bay of Bothnia, there is 10–30 cm thick fast ice in the archipelagos. Further out in the east, there is new ice and thin, very open ice, and in the west a thin band of new ice. Ice growth and ice formation is expected the coming days. The ice drift is to the west, changing to south tomorrow.

Norra Kvarken

In the archipelagoes off Vaasa, there is 10–30 cm thick fast ice to Ensten. Further out, there is new ice and ice formation. Along the Swedish coast, there is 10–20 cm thick fast in the inner archipelagoes. At sea, there is 3–15 cm thick very open to

open ice and new ice.

Some ice growth is expected the coming days. The ice drifts to the west/northwest, changing to south tomorrow.

Sea of Bothnia

On Ångermanälven, there is 15–35 cm thick fast ice in the upper part and 5–20 cm level ice in the lower part. Else, there is 10–20 cm fast ice or thin level ice in the archipelagos and bays. Further out

along the Finnish coast, there is a thin belt of 3–10 cm thick, close drift ice in the north and open drift ice in the south.

Some ice growth is expected the coming days.

Archipelago and Åland Sea

Thin level ice is present in inner archipelagos of the coasts. Else, there is new ice in the archipela-

gos.

No larger changes are expected the coming days.

Gulf of Finland

From St. Petersburg up to the dike, there is 20–30 cm thick fast ice. Farther out, there is very close, 5–20 cm thick ice past Šepelevskij. In the Bay of Vyborg, there is 20–30 cm fast ice. In the Bjerkesund, there is fast ice or thin level ice. In the archipelagos of the northern coast, there is 10–30 cm fast ice and thin level ice further out. At sea,

there is open, 3–10 cm thick drift ice or new ice east of 27°30' E. At the southern coast, new ice is present Narva Bay and in places near the shore. In Lake Saimaa and the Saimaa Canal, there is 15–35 cm thick ice.

No larger changes are expected the coming days and the ice drift is in northerly directions.

Gulf of Riga

In Moonsund, there is very close, 10–25 cm thick ice. In the central part, there is very open to close ice. At the south coast of Saaremaa, there is thin level ice and very open ice further out. In Pärnu

Bay, there is 10–25 cm thick fast ice or very close ice to Kihnu.

No larger changes are expected. Ice drift is mostly to the north/northeast.

Northern Baltic

In Lake Mälaren, there is 10–20 cm thick fast ice or level ice in the western part. The central part is mostly ice free and in sheltered bays further east, there is thin level or new ice. Along the Swedish

coast, there is new ice or shuga in some sheltered bays.

No major changes the coming days.

Central Baltic

New ice occurs in some sheltered bays along the Swedish coast.

Some ice melt the coming days.

Southeastern Baltic

In the Curonian Lagoon, there is very close ice in the eastern part. In the Vistula Lagoon, there is

thin ice in places.

Ice melt continues the coming days.

Southern Baltic

In the Szczecin Lagoon, rest ice is present in places along the northern shore.

Ice melt continues.

Skagerrak und Kattegat

In some inner fjords of the Skagerrak, there is fast ice, up to 30 cm thick at a few places, and new ice

at places. Else, it is mostly ice free.

No large changes are expected.

Swedish Lakes

New ice as well as thin level ice is present in sheltered bays of Lake Vänern. Along the northern

coast, there is 5–20 cm thick fast ice.

Some ice melt is expected the coming days.

Information of the Icebreaker Services

Estonia

Icebreaker: EVA-316 assists to the port of Pärnu.

Finland/Sweden

Vessels bound for Gulf of Bothnia ports in which assistance restrictions apply, shall when passing latitude 60° 00' N report their nationality, name, destination, ETA and speed to ICE INFO on VHF channel 78. This report can also be given directly by telephone to +46 10 492 7600.

Vessels bound for Finnish or Swedish ports with assistance restrictions in the Quark or the Bay of Bothnia shall, 20 nautical miles before Nordvalen Lighthouse (63° 32.15' N 20° 46.60' E), report in accordance with the instructions for winter navigation to Bothnia VTS on VHF channel 67.

Icebreakers:

OTSO, KONTIO, URHO, FREJ and YMER assist in the Bay of Bothnia. ALE assists in the Quark and SISU in the eastern Gulf of Finland. PROTECTOR and METEOR assist in the northern Lake Saimaa. CALYPSO assists in the southern Lake Saimaa and the Saimaa Canal.

Norway

Husøysund, Tønsberg indre havn and Vestfjorden (Tønsberg): Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size. (28.12.21)

Langårsund and Hellefjorden (Kragerø): Navigation temporarily closed. (27.12.21)

Russia

There are restrictions for small crafts going to Vysotsk, Vyborg, St. Petersburg, Ust-Luga and Primorsk.

Icebreakers: Several icebreakers assist vessels to the port of Vyborg, Vysotsk, Primorsk, Ust-Luga and St. Petersburg.
