Übersicht

In den Schären der Bottenwiek liegt im Norden 20–50 cm dickes Festeis und im Süden 10–30 cm dickes Festeis. Auf See befindet im Norden und Nordosten dichtes, 10–40 cm dickes, örtlich aufgepresstes Eis. Ansonsten außerhalb des Festeises örtlich lockerem bis dichtem Treibeis, am Eisrand im Osten liegt festgestampftes Eis. In Norra Kvarken liegt in den Schären bis zu 35 cm dickes Festeis und auf See treibt östlich von Holmöarna lockeres Eis. Entlang der Küsten und in den Schären der Bottensee, dem Schärenmeer und der Ålandsee liegt Festeis oder dünnes ebenes Eis. Im Finnischen Meerbusen liegt entlang der Nordküste und im Osten bis 35 cm dickes Festeis. Im östlichen Teil treibt auf See sehr dichtes, 10–20 cm dickes Eis. Im Rigaischen Meerbusen befindet sich bis zu 25 cm dickes Eis im Moonsund und in der Pärnubucht. Dünnes, teilweise ebenes Eis kommt örtlich in der nördlichen Ostsee, dem Vänern und der südöstlichen Ostsee vor. Dünnes Eis kommt in geschützten Buchten der zentralen Ostsee vor. In einigen inneren Fjorden des Skagerraks liegt dünnes Eis oder Festeis.

Overview

In the archipelagos of the Bay of Bothnia, there is 20–50 cm thick fast ice in the north and 10–30 cm thick fast ice in the south. At sea, there is very close, 10–40 cm thick very close ice, partly ridged in the north-east. Else, outside the fast ice, open to close drift ice at places, with a brash ice barrier at the ice edge in the east. In Norra Kvarken, there is up to 35 cm thick fast ice in the archipelagos and at sea open ice east of Holmöarna. Along the coasts and archipelagos of the Sea of Bothnia, the Archipelago Sea and Åland Sea, there is fast ice or thin level ice. In the Gulf of Finland, there is up to 35 cm thick fast ice along the northern coast and in the easternmost part. At sea in the east, there is mostly very close, 10–20 cm thick ice. In the Gulf of Riga, there is up to 25 cm thick ice in Moonsund and Pärnu Bay. Thin ice and thin level ice occurs at places in the northern Baltic, Lake Vänern and the southeastern Baltic. Thin ice occurs in sheltered areas of the central Baltic. Fast ice or thin ice is present in some inner fjords of the Skagerrak.

Bay of Bothnia

In the archipelagos of the northern Bay of Bothnia, there is 20–50 cm thick fast ice, from the Finnish coast reaching out to Hebe and Kattilankalla. Off the fast ice in the east, there is 10–35 cm thick consolidated ice to Kemi-3 and Oulu-4. Further out to the line Kemi-1 – Merikallat – outside Raahe, there is close 10–40 cm thick ice, partly ridged; in the northeast the ice is difficult to force in places.

More in the south, a brash ice barrier is present outside Raahe extending also further south and being difficult to force. Else at sea north of ~60°N mostly very open ice with areas of open or close ice. More southwards on the Swedish side there is very open ice west of the line Gasören – Norströmgrund. In the southern Bay of Bothnia, there is 10–35 cm thick fast ice in the archipelagos. Out-

side on the Finnish side, there is a belt of 10-30cm very close ice with a, in places difficult to force, brash ice barriers and further out open ice. With

Norra Kvarken

In the archipelagoes off Vaasa, there is 10–35 cm thick fast ice to Ensten. Further out to Norra Globsten 5-20cm thick very close ice. Along the Swedish coast, there is 10–25 cm thick fast in the inner archipelagos and very close ice at the western

Sea of Bothnia

On Ångermanälven, there is 15–35 cm thick fast ice and 5–15 cm level ice in the entrance. Else, there is 10–25 cm fast ice or thin level ice in the eastern archipelagos and the bays in the north-

Archipelago and Åland Sea

Thin level ice is present in inner archipelagos of the coasts and around the Åland islands. On the larger fairways and the outer archipelago at the

Gulf of Finland

From St. Petersburg up to longitude of Tolbucin lighthouse there is 25–35 cm thick fast ice. In the Bay of Vyborg, there is 20–30 cm fast ice. In the Bjerkesund, there is 20–30 cm thick fast ice or 10-15cm thick very close ice. At sea, east of Seskar there is very close, 10–20 cm thick ice. Further west to longitude of lighthouse Sommers there is open water. In the archipelagos of the northern coast, there is fast ice, 10-30cm thick in the west

Gulf of Riga

In Moonsund, there is very close, 10–25 cm thick ice or fast ice along the coasts, in the central part there is very open ice or open water. In Pärnu Bay, there is 10–25 cm thick fast ice or partly ridged

Northern Baltic

In Lake Mälaren, there is 5–20 cm thick fast ice or level ice in the western part; the central part is mostly ice free and in sheltered bays further east,

Central Baltic

New ice occurs in some sheltered bays along the Swedish coast.

Southeastern Baltic

In the Curonian Lagoon, there is very close, 5–10 cm thick ice in the eastern part.

Skagerrak and Kattegat

In some inner fjords of the Skagerrak, there is fast ice, up to 30 cm thick at a few places, and new ice

Swedish Lakes

New ice as well as thin level ice is present in sheltered bays of Lake Vänern. Along the northern

temperatures below zero, some ice will form; the ice drift is towards the south/ southeast.

coast of Holmöarna. At sea, east of Holmöarna, there is mostly thin open ice, south of Nordvalen mostly ice free. The ice will be drifting southwards and some new ice formation may occur.

west; in the southwestern bays, there is mostly 5-20cm level or fast ice. Along the eastern ice edge, there is thin very close ice and new ice at places. The ice at sea will drift southwards.

eastern coast, there is mainly open water. No larger changes are expected.

and 20–35 cm thick in the east. Off the fast ice in the northeast, there is open water. At the southern coast, thin ice is present in some sheltered bays along the shore, in Luga and Narva Bay there is fast ice along the coast and further out a fringe with very close ice. In Lake Saimaa and the Saimaa Canal, there is 25–40 cm thick ice. No larger changes are expected.

very close ice in the eastern part there is open to close ice in the western part. A southward ice drift is expected.

there is thin level or new ice. Along the Swedish coast, there is new ice or shuga in some sheltered bays. No larger changes are expected.

No larger changes are expected.

No larger changes are expected.

at places. No larger changes are expected.

coast, there is 5–20 cm thick fast ice. Some ice formation.

Information of the Icebreaker Services

Estonia

Icebreaker: EVA-316 assists to the port of Pärnu.

Finland/Sweden

The traffic separation schemes in the Quark are temporarily out of use from 15 January 2022.

Vessels bound for Gulf of Bothnia ports in which assistance restrictions apply, shall when passing latitude 60° 00' N report their nationality, name, destination, ETA and speed to ICE INFO on VHF channel 78. This report can also be given directly by telephone to +46 10 492 7600.

Vessels bound for Finnish or Swedish ports with assistance restrictions in the Quark or the Bay of Bothnia shall, 20 nautical miles before Nordvalen Lighthouse (63° 32.15' N 20° 46.60' E), report in accordance with the instructions for winter navigation to Bothnia VTS on VHF channel 67.

Icebreakers:

OTSO, KONTIO, URHO, POLARIS, FREJ and YMER assist in the Bay of Bothnia. ALE assists in the Quark, ZEUS in the northern Sea of Bothnia and VOIMA in the eastern Gulf of Finland. PROTECTOR assists in the northern Lake Saimaa. CALYPSO assists in the southern Lake Saimaa and the Saimaa Canal.

Norway

Husøysund, Tønsberg indre havn and Vestfjorden (Tønsberg): Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size. (28.12.21)

Hellefjorden (Kragerø): Navigation temporarily closed. (10.01.22)

Russia

There are restrictions for small crafts going to Vysotsk, Vyborg, St. Petersburg, Ust-Luga and Primorsk.

Icebreakers: Several icebreakers assist vessels to the port of Vyborg, Vysotsk, Primorsk, Ust-Luga and St. Petersburg.
