1

Übersicht

In den Schären der Bottenwiek befindet sich im Norden bis 60 cm dickes Festeis und im Süden bis 35 cm dickes Festeis. Auf das Festeis folgt im Norden zuerst eine Rinne und dann bis zu 40 cm dickes zusammenhängendes oder sehr dichtes, örtlich aufgedichtetes oder aufgeschobenes Eis. Im Westen verläuft eine Rinne mit Neueisbildung oder dünnem. Im Osten treibt auf See zumeist bis 25 cm dickes, sehr dichtes Eis. In Kvarken liegt bis 35 cm dickes Festeis in den Schären und Buchten und auf See kommt offenes Wasser bis lockeres, dünnes Eis vor. In der Bottensee und dem Schärenmeer kommt dünnes, ebenes Eis oder Festeis entlang der Küsten vor. Im Mälarsee liegt dünnes, ebenes Eis oder Neueis. Im Finnischen Meerbusen liegt in den östlichsten Buchten bis 40 cm dickes Festeis. Auf See treibt im Osten dichtes bis sehr dichtes Eis und im Norden treibt zumeist dünnes Eis. In den Schären und Buchten entlang der nördlichen Küste kommt Festeis vor. Im Nordosten des Rigaischen Meerbusen befindet sich 10–20 cm dickes Festeis oder sehr dichtes Eis in geschützten Gebieten und offenes Wasser etwas weiter außerhalb.

Overview

In the archipelagos of the Bay of Bothnia, there is up to 60 cm thick fast ice in the north and up to 35 cm thick fast ice in the south. In the north, there is first a lead and later up to 40 cm thick, partly ridged and rafted consolidated or very close ice further out. Along the western coast there is a lead with new ice formation of thin ice. In the east, there is mostly up to 25 cm thick, very close ice. In the Quark, there is up to 35 cm thick fast ice in the archipelagos and bays and at sea, there is open water to thin open ice. In the Sea of Bothnia and the Archipelago Sea, fast ice or thin level ice is present along the coasts. In Lake Mälaren, there is thin level ice and new ice. In the Gulf of Finland, up to 40 cm thick fast ice is present in the easternmost bays. At sea in the east, there is close to very close ice in the south and mostly thin, very open ice in the north. In the archipelagos and bays along the northern coast, there is fast ice. In the northeastern Gulf of Riga, there is 10–20 cm thick fast ice or very close ice in sheltered bays and open water somewhat further out.

Bay of Bothnia

In the archipelagos of the northern Bay of Bothnia, there is 30–60 cm thick fast ice and compact ice, out to Kemi-3 and Kattilankalla. Further out in the northeast 20-40cm thick, ridged, very close ice to Lallinmöyly and Oulu 1. From north of Kemi-1 there is a lead with new ice formation stretching towards the southeast and the west. Further out at sea in

the north, east of about 22°45'E, there is 10-40cm thick, very close ice, rafted and ridged in places; towards the western coast there is thin level ice and new ice. In the southern Bay of Bothnia, there is 15–35 cm thick fast ice in the archipelagos, further out in the east there is 10-25cm thick rafted, very close ice with some thicker floes. Westwards to-

wards the Swedish coast there is mostly new ice or thin open to close ice

The Quark

There is 15–40 cm thick fast ice in the Vaasa archipelago out to Ensten. Further out there is very close, 5–25 cm thick rafted ice, with some thicker floes out to a line from 15nm northwest of Kokkola lighthouse to Helsigkalla. On the Swedish side,

Sea of Bothnia

In the archipelagos along the eastern coast, there is 15–25 cm thick fast ice and new ice at places somewhat further out. Along the western coast, there is thin level ice or new ice in sheltered bays in the south and up to 40 cm thick fast ice in inner

Archipelago Sea and Åland Sea

At the eastern coast, there is 5–15 cm fast or level ice in the inner bays and new ice somewhat further out. In the western and central part new ice is pre-

Northern Baltic

In Lake Mälaren, there is 5–15 cm thick fast ice or thin level ice in the western part, with areas of open water. In the eastern part, there is thin ice in sheltered bays and open water. New ice occurs in

Gulf of Finland

From St. Petersburg out to Kotlin and in the bay north of Kotlin, there is 30–50 cm thick fast ice and 20-35cm thick compact ice in the fairway. In the Bay of Vyborg, there is 20–35 cm thick fast ice and in the Bjerkesund, there is 10–20 cm thick fast ice. At sea in the south there is 10-25cm thick close ice out to Moščnyj as well as in the Koporye and Luga bay. At sea in the north, outside the Bay of Vyborg, there is open ice out to the lighthouse Sommers. From Moščnyj towards the northwest there is very open ice. Along the northern coast, there is 15–30

Gulf of Riga

In Väinameri, there is 10–20 cm thick fast ice near the coasts. Somewhat further out, there is close ice and on the fairway is open. In the Bay of Pärnu, there is a belt of very close ice at the eastern coast between Uulu and Reiu and in the western part there is very open ice and open water up the lati-

Skagerrak and Kattegat

Up to 15 cm thick ice or new ice is present in some inner Norwegian Fjords. At a few places thicker ice occurs.

Swedish Lakes

Thin level ice or new ice is present in some sheltered bays in the northeast of Lake Vänern.

Continuing ice formation and growth and an at most slight southwesterly ice drift is expected.

there is mostly up to 35 cm thick fast ice in inner bays. At sea, there is open water in the south and thin open ice in the north. Ice growth and ice formation is expected with only minor ice drift.

bays in the north. On Ångermanälven, there is 20–40 cm thick fast or level ice. Some ice formation and ice growth along the coasts is expected.

sent along the coasts. Some ice formation and ice growth is expected.

sheltered places along the outer coast. Some ice formation and ice growth is possible at sheltered places.

cm thick fast ice in the eastern archipelagos. Further out, there is thin level ice or very close ice off Kotka and Hamina. In the western archipelagos, there is 5–15 cm thick fast ice. At the southern coast there is very open drift ice near the coast in Kunda bay. Ice formation and ice growth continues over the weekend with temperatures dropping below zero also in the western parts. The ice will mostly drift to the south with ceasing speed.

tude of the southern point of Kihnu. In the port of Riga and in the fairway to Nersrags there is open water. Some ice formation and ice growth is expected with only minor ice drift.

Some ice formation is possible in sheltered places.

Some ice formation and ice growth is possible.

Estonia**Icebreakers:**

EVA-316 assists in the port of Pärnu. **BOTNICA** assists to the port of Sillamäe.

Finland/Sweden

The Saimaa Canal is closed for traffic since 4th January.

Vessels bound for Gulf of Bothnia ports in which assistance restrictions apply, shall when passing latitude 60° 00' N report their nationality, name, destination, ETA and speed to ICE INFO on VHF channel 82. This report can also be given directly by telephone to +46 10 492 7600.

Vessels bound for Finnish or Swedish ports with assistance restrictions in the Quark or the Bay of Bothnia shall, 20 nautical miles before Nordvalen Lighthouse (63° 32.15' N 20° 46.60' E), report in accordance with the instructions for winter navigation to Bothnia VTS on VHF channel 67.

The traffic separation schemes in the Quark are temporarily out of use from 7 February due to ice conditions.

Icebreakers:

POLARIS, KONTIO, OTSO, SISU, ATLE, YMER and FREJ assist in the Bay of Bothnia. ZEUS assists in the southern Bay of Bothnia and in the Quark. ALE assists in the Quark. CALYPSO assists in the region of Kotka and Hamina.

Norway

Husøysund and Vestfjorden (Tønsberg): Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size. 31.01.23

Tønsberg indre havn (Tønsberg): Navigation without icebreaker assistance possible only for high-powered vessels of strong construction and suitable for navigation in ice. 31.01.23

Russia

There are restrictions for small crafts going to Vysotsk, Vyborg, St. Petersburg, Ust-Luga and Primorsk. No sailing of barge by tug to Vyborg and Vysotsk.

Icebreakers: Several icebreakers assist vessels to the port of Vyborg, Vysotsk, Primorsk, Ust-Luga and St. Petersburg.
