### Übersicht

In den Schären der Bottenwiek befindet sich im Norden bis 70 cm dickes Festeis und im Süden bis 40 cm dickes Festeis. Außerhalb davon befindet sich im Nordosten ein breites Gebiet mit dünnen, ebenem Eis und im Westen verläuft eine Rinne. Auf See treibt ansonsten zumeist sehr dichtes, aufgeschobenes und aufgedrücktes Eis mit Spalten, welches im Norden bis 60 cm dick und im Süden bis 40 cm dick ist. In Kvarken liegt bis 45 cm dickes Festeis in den Schären und Buchten und auf See kommt 5–25 cm dickes, dichtes Eis und Neueis vor, was bis in die nördliche Bottensee hineinreicht. In der Bottensee und dem Schärenmeer kommt entlang der Küsten 5–40 cm dickes, ebenes Eis oder Festeis vor und außerhalb davon Neueis. Im Mälarsee liegt morsches Eis. Im Finnischen Meerbusen liegt in den östlichsten Buchten bis 35 cm dickes Festeis. Auf See treibt im Norden östlich von etwa 27°O sehr lockeres und 5–30 cm dickes sehr dichtes Eis. In den Schären und Buchten entlang der nördlichen Küste kommt Festeis vor.

### Overview

In the archipelagos of the Bay of Bothnia, there is up to 70 cm thick fast ice in the north and up to 40 cm thick fast ice in the south. Further out in the northeast there is a wide area of thin level ice and in the west there is a lead. Else at sea, there is ridged and rafted, very close ice with cracks, which is up to 60 cm thick in the north and up to 30 cm thick in the south. In the Quark, there is up to 45 cm thick fast ice in the archipelagos and bays and at sea, there is 2–25 cm thick, close ice and new ice reaching into the northernmost Sea of Bothnia. In the Sea of Bothnia and the Archipelago Sea, 5–40 cm thick fast ice or level ice is present at the coasts with new ice outside. In Lake Mälaren, there is rotten ice. In the Gulf of Finland, up to 35 cm thick fast ice is present in the easternmost bays. At sea, there is very open to 5–30 cm thick very close ice in the north east of about 27°E. In the archipelagos and bays along the northern coast, there is fast ice.

### Bay of Bothnia

In the archipelagos of the northern Bay of Bothnia, there is 45–70 cm thick fast ice and compact ice, out to Malören, Kemi-3 and Kattilankalla. Outside the fast ice in the north and northeast there is 10–30nm wide area with thin level ice and new ice as well as some thicker floes. Along the western fast ice there is a lead with new ice. At sea there is 30–60 cm thick, ridged, very close ice around 65°N

23°E. Further south at sea, there is 20–40 cm thick very close ice, with some ridges in the east, down to the fast ice in the Vaasa archipelago. There are leads and cracks in the ice field. The fast ice in the southern archipelagos is 20–40 cm thick. Over the weekend ice growth and ice formation will continue. The overall ice drift will be slow and towards the south.

### The Quark

There is 25–45 cm thick fast ice in the Vaasa archipelago out to Ensten. On the Swedish side, there is 30-50 cm thick fast ice in inner bays. At sea, there is 2–25 cm thick close to very close in the east and new ice or 2-15cm thick close ice in

the west.

Some ice formation is expected over the weekend during night and the weak ice drift will be towards the south.

### Sea of Bothnia

In the archipelagos along the eastern coast, there is 10–30 cm thick fast ice. Along the western coast, there is thin level ice or thin ice in sheltered bays in the south and up to 40 cm thick fast ice in inner bays in the north. Outside there is mostly new ice. On Ångermanälven, there is 30–50 cm

thick fast ice. At sea, in the northernmost part, there is open water, thin open ice and new ice.

Some freezing may occur over night, but overall no larger change is expected. The ice at sea in the north will drift southwards and dispers.

### Archipelago Sea and Åland Sea

At the eastern coast, there is rotting or rotten ice in the inner bays, further out thin very open ice or open water in the archipelago. In the western and central part, thin level ice and new ice is present in

inner bays.

Some freezing may occur over night, but overall no larger change is expected.

### Northern Baltic

In Lake Mälaren, there is rotten ice in the western part and open water in the central part.

Overall no larger change is expected.

### Gulf of Finland

15–35 cm thick fast ice is present along the shores of the Neva bay and 10-30cm thick, very close ice is present from St. Petersburg out to Kotlin; further west there is very open ice. In the Bay of Vyborg, there is 15–30 cm thick fast ice and in the entrance 2-10cm thick close ice. In the Bjerkesund, there is 10–25 cm thick fast ice and open ice in the entrance. At sea there is an area of 5-20cm thick, very close ice around 60°10'N/ 28°E surrounded

by open to very open ice .At sea in the southeast there is very open ice. Along the northern coast, there is 10–40 cm thick fast ice in the eastern archipelagos with thin ice outside; rotten ice is present in the western archipelagos.

Some ice formation may occur over night during the weekend. Overall the slow ice drift will be towards the south.

### Skagerrak and Kattegat

Remnants of thin ice and up to 30 cm thick, partly rotten fast are present in some inner Norwegian

fjords

No larger change is expected.

### Swedish Lakes

Thin, very open ice or open water is present in sheltered bays of Lake Vänern.

No larger change is expected.

**Finland/Sweden**

The Saimaa Canal is closed for traffic since 4<sup>th</sup> January.

Vessels bound for Gulf of Bothnia ports in which assistance restrictions apply, shall when passing latitude 60° 00' N report their nationality, name, destination, ETA and speed to ICE INFO on VHF channel 82. This report can also be given directly by telephone to +46 10 492 7600.

Vessels bound for Finnish or Swedish ports with assistance restrictions in the Quark or the Bay of Bothnia shall, 20 nautical miles before Nordvalen Lighthouse (63° 32.15' N 20° 46.60' E), report in accordance with the instructions for winter navigation to Bothnia VTS on VHF channel 67.

The traffic separation schemes in the Quark are temporarily out of use from 7 February due to ice conditions.

**Icebreakers:**

POLARIS, KONTIO, OTSO, SISU, ATLE, YMER and FREJ assist in the Bay of Bothnia. ZEUS assists in the southern Bay of Bothnia and in the Quark. ALE assists in the Quark. URHO assists in the eastern Gulf of Finland.

**Norway**

Husøysund and Vestfjorden (Tønsberg): Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size. 31.01.23

**Russia**

There are restrictions for small crafts going to Vysotsk, Vyborg, St. Petersburg, Ust-Luga and Primorsk. No sailing of barge by tug to Vyborg and Vysotsk.

**Icebreakers:** Several icebreakers assist vessels to the port of Vyborg, Vysotsk, Primorsk, Ust-Luga and St. Petersburg.

## Baltic Sea Ice Code

<p>First number:</p> <p><b>A<sub>B</sub> Amount and arrangements of sea ice</b></p> <p>0 Ice free</p> <p>1 Open water – concentration less than 1/10</p> <p>2 Very open ice - concentration 1/10 to 3/10</p> <p>3 Open ice – concentration 4/10 to 6/10</p> <p>4 Close ice – concentration 7/10 to 8/10</p> <p>5 Very close ice – concentration 9/10 to 9+/10</p> <p>6 Compact ice, including consolidated ice – concentration 10/10</p> <p>7 Fast ice with drift ice outside</p> <p>8 Fast ice</p> <p>9 Lead in very close or compact drift ice or along the fast ice edge</p> <p>/ Unable to report</p> <p>Third number:</p> <p><b>T<sub>B</sub> Topography or form of ice</b></p> <p>0 Pancake ice, ice cakes, brash ice – less than 20 m across</p> <p>1 Small ice floes – 20 to 100 m across</p> <p>2 Medium ice floes – 100 to 500 m</p> <p>3 Big ice floes – 500 to 2000 m across</p> <p>4 Vast or giant ice floes – more than 2000 m across – or level ice</p> <p>5 Rafted ice</p> <p>6 Compact slush or shuga, or compacted brash ice</p> <p>7 Hummocked or ridged ice</p> <p>8 Thaw holes or many puddles on the ice</p> <p>9 Rotten ice</p> <p>/ No information or unable to report</p>	<p>Second number:</p> <p><b>S<sub>B</sub> Stage of ice development</b></p> <p>0 New ice or dark nilas (less than 5 cm thick)</p> <p>1 Light nilas (5 - 10 cm thick) or ice rind</p> <p>2 Grey ice (10 - 15 cm thick)</p> <p>3 Grey-white ice (15 - 30 cm thick)</p> <p>4 White ice, first stage (30 - 50 cm thick)</p> <p>5 White ice, second stage (50 - 70 cm thick)</p> <p>6 Medium first year ice (70 - 120 cm thick)</p> <p>7 Ice predominantly thinner than 15 cm with some thicker ice</p> <p>8 Ice predominantly grey-white ice (15 – 30 cm) with some thicker ice</p> <p>9 Ice predominantly thicker than 30 cm with some thinner ice</p> <p>/ No information or unable to report</p> <p>Fourth number:</p> <p><b>K<sub>B</sub> Navigation conditions in ice</b></p> <p>0 Navigation unobscured</p> <p>1 Navigation difficult or dangerous for wooden vessels without ice sheathing</p> <p>2 Navigation difficult for unstrengthened or low-powered vessels built of iron or steel. Navigation for wooden vessels even with ice sheathing not advisable</p> <p>3 Navigation without icebreaker assistance possible only for high-powered vessels of strong construction and suitable for navigation in ice</p> <p>4 Navigation proceeds in lead or broken ice-channel without the assistance of an icebreaker</p> <p>5 Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size</p> <p>6 Icebreaker assistance can only be given to vessels of special ice class and of special size</p> <p>7 Icebreaker assistance can only be given to vessels after special permission</p> <p>8 Navigation temporarily closed</p> <p>9 Navigation has ceased</p> <p>/ Unknown</p>
