Übersicht

In der Bottenwiek befindet sich in den nördlichen Schären bis 60 cm dickes, in den südlichen bis 50 cm dickes Festeis. Auf See treibt im Nordosten zumeist 30–50 cm dickes, sehr dichtes Eis, örtlich aufgepresst, übereinandergeschoben und teilweise schwer zu passieren. Im Süden treibt auf See 10–30 cm dickes, sehr dichtes Eis oder ebenes Eis. An den Küsten von Norra Kvarken liegt bis 50 cm dickes Festeis und auf See treibt meist 5–30 cm dickes sehr dichtes Eis. An den Küsten der Bottensee kommt im Osten bis 55 cm und im Westen bis 30 cm dickes Festeis vor. Weiter außerhalb befindet sich im Westen sehr dichte Eis und dünnes, lockeres Eis im Osten. Auf See treibt im Norden lockeres bis sehr dichtes, 2–20 cm dickes Eis und im Süden kommt meist offenes Wasser vor. Das Schärenmeer ist größtenteils mit ebenem Eis oder Festeis bedeckt. Im Osten und Norden des Finnischen Meerbusens liegt bis 50 cm dickes Festeis und östlich 27°E treibt auf See sehr lockeres bis sehr dichtes, bis 35 cm dickes Eis und westlich davon lockeres 3–15 cm dickes Eis oder Neueis bis etwa 25°00'E. Im Rigaischen Meerbusen kommt an der nordöstlichen Küste zu 35 cm dickes Festeis vor und auf See treibt im Norden sehr dichtes Eis und sehr lockeres Eis entlang der Eiskante. Ansonsten kommt im Mälaren, Vänern, norwegischen Fjorden und entlang der schwedischen Küste nördlich von Kalmar bis 30 cm dickes Festeis oder ebenes Eis vor.

Overview

In the Bay of Bothnia there is fast ice in the archipelagos, up to 60 cm thick in the north and up to 50 cm thick in the south. At sea in the northeast, there is mostly 30–50 cm thick, very close, partly ridged and rafted ice that is difficult to force at places. At sea in the south there is 10–30 cm thick very close ice or level ice. In the Quark there is up to 50 cm thick fast ice at the coasts and at sea there is mostly 5–30 cm thick, very close ice. At the coasts of the Sea of Bothnia there is fast ice, up to 55 cm thick in the east and up to 30 cm thick in the west. Further out in the west is very close ice and in the east there is thin, open ice. At sea there is open to very close, 2–20 cm thick ice in the north and mostly open water in the south. Level ice or fast ice covers large parts of the Archipelago Sea. There is up to 50 cm thick fast ice at the eastern and northern coast of the Gulf of Finland. At sea there is up to 35 cm thick, very open to very close ice east of 27° and further west there is open, 3–20 cm thick ice or new ice to about 25°00'E. In the Gulf of Riga there is up to 35 cm thick fast ice at the coast in the northeast and at sea there is very close ice with very open ice at the ice edge in the north. Else up to 30 cm thick fast ice or level ice is present in the Mälaren, Vänern, Norwegian fjords and along the Swedish coast north of Kalmar.

Bay of Bothnia

In the archipelagos of the Bay of Bothnia there is fast ice with some consolidated ice further out; 35–

60 cm thick in the north and up to 25–50 cm thick in the southern part. In the northeast the fast ice

stretches out to Malören, Kemi-3, Oulu-3 and Raahe lighthouse. In the north and east runs a lead covered with 5–20 cm thick level ice or new ice past Malören – Kemi-1 – Merikallat to off Raahe and further to the Quark. At sea north of about a line from Ulkokalla to Simpgrundet, there is 30–50 cm thick, very close, ridged and rafted ice. The ice

The Quark

There is 35–50 cm thick fast ice in the Vaasa archipelago out to Ensten followed by 10–30 cm thick very close ice to Norrskär. Along the Swedish coast there is up to 40 cm thick fast ice. At sea there is 5–30 cm thick mostly very close ice.

Sea of Bothnia

Along the coasts there is mostly fast ice in the inner bays; 20–55 cm thick in the east and 5–30 cm thick in the west. On Ångermanälven, there is 15–30 cm thick fast ice. At sea north of about 62°10'N there is close to very close, 2–20 cm thick drift ice in the west and open, 2–10 cm thick ice in the east. In the southern part, there is very close 5–20 cm thick ice off the Swedish coast and new

Archipelago Sea and Åland Sea

In the Archipelago Sea there is 15–50 cm thick fast ice in the inner archipelago of the Finnish coast. Mostly 10–30 cm thick, level or fast ice with new ice and ice formation are present in the outer archipelagos to the Åland Islands. In the Åland Sea

Northern Baltic

In Lake Mälaren there is 10–30 cm thick fast ice. Along the outer Swedish coast there is 5–20 cm thick fast ice or level ice.

Gulf of Finland

Along the northern coast there is fast ice in the archipelago, 10–30 cm thick in the west and up to 55 cm thick in the east. In the Vyborg Bay there is 30–40 cm thick fast ice and in the Bjerkesund there is 25–35 cm thick fast ice. From St. Petersburg to the longitude of lighthouse Tolbuchin there is 35–45 cm thick fast ice. Further west follows very open ice. South of the line Seskar – Moščnyj is very close, 10–35 cm thick drift ice. North of about the line Gogland – Seskar is very close, 10–

Gulf of Riga

In Väinameri there is 25–40 cm thick fast ice near the coasts and very close, 10–30 cm thick ice at sea. Off the south coast of Saaremaa there is very close and at places close, 5–20 cm thick ice. In the Bay of Pärnu, there is 25–35 cm thick fast ice. Further out there is very close, 5–20 cm thick ice to

Central Baltic

Thin level ice is present at places along the Swedish coast.

field is difficult to force at places. Else at sea in the east is level ice and very close, 10–30 cm thick and rafted ice in the west.

With moderate to severe frost ice in the north formation and ice growth will continue. The ice will drift to the west/northwest.

South of Norrskär is an area with new ice.

With mostly light to moderate frost at sea, ice formation and ice growth will continue with a mostly northwesterly ice drift.

ice further out. In the east there is thin open ice and new ice off the coast. At sea in the south there is open water.

With light frost in the north and temperatures around 0 °C in the south some ice growth near the coasts is possible. The ice will drift in northerly directions.

there is 5–20 cm thick fast or level ice in bays along the coast. In the northern part there is very close ice slightly further out and open water at sea. With temperatures around 0 °C no larger changes are expected.

With temperatures around 0°C no larger change is expected.

35 cm thick drift ice and level ice at the fast ice. Off the fast ice further west is level ice and very close ice. Else at sea to about Helsinki lighthouse is open, 3–15 cm ice in the northern part and new ice, very open ice or open water elsewhere.

With moderate frost in the east and temperatures around 0 °C in the west some ice formation and ice growth is expected in the east. The ice will drift to northwest.

about Kihnu. Else at sea in the northeast is very open ice.

With temperatures mostly around 0 °C no larger changes are expected but the ice will slightly drift to the north.

With temperatures above 0 °C some ice melt is expected.

Southeastern Baltic

In the Curonian Lagoon, there are some ice remnants.

With temperatures above 0°C further ice melt is expected.

Skagerrak and Kattegat

In some sheltered Norwegian fjords and bays is thin level ice or fast ice notably near Tønsberg, Kragerø, Svinesund, Mossesund and Drammensfjord. Along the Swedish coast of the Skager-

ak there is very open ice in some sheltered areas. With temperatures mostly around or above 0°C no larger changes are expected the coming day.

Swedish Lakes

In Lake Vänern 10–30 cm thick fast ice is present at the coasts. In the Dalbosjön there is 10–20 cm thick, very close or level ice outside the coast with brash ice at the edge; still further out there is new ice. In the Värmlandssjön there is level ice outside

the northern fast ice. In the south there is open to close ice and open water elsewhere. With temperatures around 0°C no larger changes are expected with only light winds.

Dr. W. Aldenhoff

Estonia

Icebreaker: EVA-316 assists to the port of Pärnu. BOTNICA assists to the ports of Kunda and Sillamäe.

Finland/Sweden

The traffic separation schemes in the Lake Vänern are temporarily out of use from 12 January due to ice conditions.

The transit traffic west of Holmöarna is temporarily prohibited.

Kalmarsund and Öregrundsgrepen: Transit traffic for low powered vessels is not recommended.

The traffic separation schemes in the Quark are temporarily out of use from 20 December due to ice conditions.

Vessels bound for Gulf of Bothnia ports in which assistance restrictions apply, shall when passing latitude 60° 00' N report their nationality, name, destination, ETA and speed to ICE INFO on VHF channel 82. This report can also be given directly by telephone to +46 10 492 7600.

Vessels bound for Finnish or Swedish ports with assistance restrictions in the Quark or the Bay of Bothnia shall, 20 nautical miles before Nordvalen Lighthouse (63° 32.15' N 20° 46.60' E), report in accordance with the instructions for winter navigation to Bothnia VTS on VHF channel 67.

Icebreakers: YMER, ODEN, FREJ, POLARIS, KONTIO, SISU and URHO assist in the Bay of Bothnia. ATLE and OTSO assist in the southern Bay of Bothnia and in the Quark. ZEUS, CALYPSO, **BALTICA** and BRAGE VIKING assist in the Sea of Bothnia. VOIMA, FENNICA and NORDICA assist the Gulf of Finland. ALE assists in the Vänern.

Norway

Mossesundet (Moss): Icebreaker assistance can only be given to vessels of special ice class and of special size. (05.01.24)

Kilsfjorden (Kragerø) and Hellefjorden (Kragerø): Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size. (08.01.24)

Langårsund (Kragerø): Navigation temporarily closed. (08.01.24)

Russia

There are restrictions for small crafts going to St. Petersburg, Vyborg, Vysotsk, Primorsk and Ust-Luga. Barge towed by tug not allowed to navigate in ice.

Icebreakers: Several icebreakers assist vessels to the port of St. Petersburg, Vyborg, Vysotsk, Primorsk and Ust-Luga.

Baltic Sea Ice Code

<p>First number: A_B Amount and arrangements of sea ice 0 Ice free 1 Open water – concentration less than 1/10 2 Very open ice - concentration 1/10 to 3/10 3 Open ice – concentration 4/10 to 6/10 4 Close ice – concentration 7/10 to 8/10 5 Very close ice – concentration 9/10 to 9+/10 6 Compact ice, including consolidated ice – concentration 10/10 7 Fast ice with drift ice outside 8 Fast ice 9 Lead in very close or compact drift ice or along the fast ice edge / Unable to report</p> <p>Third number: T_B Topography or form of ice 0 Pancake ice, ice cakes, brash ice – less than 20 m across 1 Small ice floes – 20 to 100 m across 2 Medium ice floes – 100 to 500 m 3 Big ice floes – 500 to 2000 m across 4 Vast or giant ice floes – more than 2000 m across – or level ice 5 Rafted ice 6 Compact slush or shuga, or compacted brash ice 7 Hummocked or ridged ice 8 Thaw holes or many puddles on the ice 9 Rotten ice / No information or unable to report</p>	<p>Second number: S_B Stage of ice development 0 New ice or dark nilas (less than 5 cm thick) 1 Light nilas (5 - 10 cm thick) or ice rind 2 Grey ice (10 - 15 cm thick) 3 Grey-white ice (15 - 30 cm thick) 4 White ice, first stage (30 - 50 cm thick) 5 White ice, second stage (50 - 70 cm thick) 6 Medium first year ice (70 - 120 cm thick) 7 Ice predominantly thinner than 15 cm with some thicker ice 8 Ice predominantly grey-white ice (15 – 30 cm) with some thicker ice 9 Ice predominantly thicker than 30 cm with some thinner ice / No information or unable to report</p> <p>Fourth number: K_B Navigation conditions in ice 0 Navigation unobscured 1 Navigation difficult or dangerous for wooden vessels without ice sheathing 2 Navigation difficult for unstrengthened or low-powered vessels built of iron or steel. Navigation for wooden vessels even with ice sheathing not advisable 3 Navigation without icebreaker assistance possible only for high-powered vessels of strong construction and suitable for navigation in ice 4 Navigation proceeds in lead or broken ice-channel without the assistance of an icebreaker 5 Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size 6 Icebreaker assistance can only be given to vessels of special ice class and of special size 7 Icebreaker assistance can only be given to vessels after special permission 8 Navigation temporarily closed 9 Navigation has ceased / Unknown</p>
