### Übersicht

In der Bottenwiek befindet sich in den nördlichen Schären bis 60 cm dickes, in den südlichen bis 50 cm dickes Festeis. Auf See treibt im Norden zumeist 30–60 cm dickes, sehr dichtes Eis, örtlich aufgepresst, übereinandergeschoben und teilweise schwer zu passieren. Im Süden treibt auf See 10–35 cm dickes, sehr dichtes Eis oder ebenes Eis. An den Küsten von Norra Kvarnen liegt bis 50 cm dickes Festeis und auf See treibt meist 10–35 cm dickes, dichtes bis sehr dichtes Eis. An den Küsten der Bottensee kommt im Osten bis 55 cm und im Westen bis 30 cm dickes Festeis vor. Auf See treibt im Norden zumeist dichtes, 5–35 cm dickes Eis. Im Süden befindet sich im Westen sehr lockeres bis dichtes Eis außerhalb des Festeises und im Osten lockeres bis dichtes Eis. Das Schärenmeer ist größtenteils mit ebenem Eis oder Festeis bedeckt und in der Ålandsee treibt etwas dünnes Eis. Im Osten und Norden des Finnischen Meerbusens liegt bis 55 cm dickes Festeis. Nördlich von etwa 59°50'N treibt auf See meist dichtes, 10–35 cm dickes Eis östlich von Kalbådagrund und bis 20 cm dickes, lockeres Eis weiter westlich. Im Rigaischen Meerbusen kommt im Nordosten zu 35 cm dickes Festeis vor. Auf See treibt im Norden entlang der Küste sehr dichtes Eis. Ansonsten kommt im Mälaren, Vänern, norwegischen Fjorden und entlang der schwedischen Küste nördlich von Kalmar bis 30 cm dickes Festeis oder dünnes, ebenes Eis vor.

### Overview

In the Bay of Bothnia there is fast ice in the archipelagos, up to 60 cm thick in the north and up to 50 cm thick in the south. At sea in the north, there is mostly 30–60 cm thick, very close, partly ridged and rafted ice that is difficult to force at places. At sea in the south there is 10–35 cm thick very close ice or level ice. In the Quark there is up to 50 cm thick fast ice at the coasts and at sea there is mostly 10–35 cm thick, close to very close ice. At the coasts of the Sea of Bothnia there is fast ice, up to 55 cm thick in the east and up to 30 cm thick in the west. At sea in the north there is mostly close, 5–35 cm thick ice. In the southern part there is very open to close ice off the fast ice in the west and thin, open to close ice in the east. Level ice or fast ice covers large parts of the Archipelago Sea and thin drifting ice is present in the Åland Sea. There is up to 55 cm thick fast ice at the eastern and northern coast of the Gulf of Finland. At sea north of about 59°50'N there is mostly close, 10–35 cm thick drift ice east of Kalbådagrund and up to 20 cm thick, open ice further west. In the Gulf of Riga there is up to 35 cm thick fast ice in the northeast and very close is present off the coast in the north. Else up to 30 cm thick fast ice or thin level ice is present in the Mälaren, Vänern, Norwegian fjords and along the Swedish coast north of Kalmar.

### Bay of Bothnia

In the archipelagos of the Bay of Bothnia there is fast ice; 35–60 cm thick in the north and up to 25–

50 cm thick in the southern part. In the northeast the fast ice stretches out to Malören, Kemi-3, Oulu-

3 and Raahe lighthouse. Off the fast ice a lead with new ice has formed along the Swedish coast from Gåsören via Malören to past Kemi-1. At sea north of about Ulkokalla is mostly 30–60 cm thick, ridged and rafted drift ice that is difficult to force at places. In the southern part, there is new ice off the Swe-

### The Quark

There is 35–50 cm thick fast ice in the Vaasa archipelago out to Ensten followed by 10–30 cm thick very close ice to Norrskär. Along the Swedish coast there is up to 40 cm thick fast ice. At sea there is new ice off the Swedish coast and close, 10–35 cm thick drift ice in the southern part.

### Sea of Bothnia

Along the coasts there is mostly fast ice in the inner bays; 20–55 cm thick in the east and 5–30 cm thick in the west. On Ångermanälven, there is 15–30 cm thick fast ice. At sea north of about 62°10'N there is new ice along the western coast and mostly close drift ice, 5–35 cm thick in the north and 5–15 cm thick in the south. Further south, there is first very open ice off the western

### Archipelago Sea and Åland Sea

In the Archipelago Sea there is 15–50 cm thick fast ice in the inner archipelago of the Finnish coast. Mostly 10–30 cm thick, level or fast ice are present in the outer archipelagos to the Åland Islands. In the Åland Sea there is 5–20 cm thick fast or level ice in bays along the coast. Further out in the

### Northern Baltic

In Lake Mälaren there is 10–30 cm thick fast ice. Along the outer Swedish coast there is 5–20 cm thick fast ice or level ice.

### Gulf of Finland

Along the northern coast there is fast ice in the archipelago, 10–35 cm thick in the west and up to 55 cm thick in the east. In the Vyborg Bay there is 30–40 cm thick fast ice and in the Bjerkesund there is 25–35 cm thick fast ice. From St. Petersburg to the longitude of lighthouse Tolbuchin there is 35–45 cm thick fast ice. Off the northern fast ice follows a band of very close ice. Northeast of the line Gogland – Luga Bay there is mostly close, 10–35 cm thick drift ice with very open ice off the

### Gulf of Riga

In Väinameri there is 25–35 cm thick fast ice near the coasts and very close, 10–30 cm thick ice at sea. Off the south coast of Saaremaa there is very first new ice followed by close to very close, 5–20 cm thick ice to about 15 NM off the coast. In the Bay of Pärnu, there is 25–45 cm thick fast ice to about the line Liu – Tahkuranna. Further out there is close, 5–30 cm thick ice to about the line Sorgu

dish coast and 10–35 cm thick drift ice in the west and 5–20 cm thick, level ice in the east.

With mostly light to moderate frost ice formation and ice growth will continue. The ice will drift to the northeast.

In the northern part is very close, 10–35 cm thick ice and 5–20 cm thick level ice in the east.

With mostly light frost at sea, some ice formation and ice growth is expected. The ice will drift to the north/northeast.

coast followed by mostly close, 5–15 thick drift ice. Off the fast ice in the east there is close brash ice followed by thin open ice.

With mostly light frost in the north and temperatures around or slightly below 0 °C in the south some ice formation and ice growth is expected in the north and along the coasts in the south. The ice will drift in northerly directions.

northern part there is drifting open ice and else at sea open water with some drifting ice.

With temperatures around or slightly below 0 °C no larger changes are expected and the ice will drift in northerly directions.

With temperatures around 0°C and light winds no larger change is expected.

northeastern coast. Further west is new ice off the northern coast to about the line Kotka lighthouse – Porvoo lighthouse and further out 10–35 cm thick, mostly close drift ice to about 59°50'N. Even further west is new ice off the northern fast ice and open to very open, 10–25 cm thick drift ice further out.

With mostly light frost some new ice formation and ice growth are expected. The ice will drift to the north.

– Häädemeeste. Even further out to the line southern point of Kihnu – Ainazi is very open ice and close ice in the east. In Irben Strait is very close ice in the north and open water in the south.

With temperatures around or slightly below 0 °C in the north, no larger changes but a northerly/northwesterly ice drift are expected.

**Central Baltic**

Thin level ice is present at places along the Swedish coast.

With temperatures mostly above 0 °C some ice melt is expected.

**Southeastern Baltic**

In the Curonian Lagoon, there is some drift ice in the northern part and else open water.

With temperatures mostly above 0°C further ice melt is expected.

**Skagerrak and Kattegat**

In some sheltered Norwegian fjords and bays is thin level ice or fast ice notably near Tønsberg, Kragerø, Svinesund, Mossesund and Drammensfjord. Along the Swedish coast of the Skager-

ak there is very open ice in some sheltered areas. With light frost in the Oslofjord and else temperatures around 0 °C no larger changes are expected.

**Swedish Lakes**

In Lake Vänern 10–30 cm thick fast ice is present at the coasts. In the Dalbosjön there is 10–20 cm thick, very close or level ice. In the Värmlandssjön there is some level ice outside the northern fast

ice. In the south there is mostly very open ice and open water elsewhere.

With temperatures around 0°C and light winds no larger changes are expected.

Dr. W. Aldenhoff

### Estonia

**Icebreaker:** EVA-316 assists to the port of Pärnu. BOTNICA assists to the ports of Kunda and Sillamäe.

### Finland/Sweden

The traffic separation schemes in the Lake Vänern are temporarily out of use from 12 January due to ice conditions.

The transit traffic west of Holmöarna is temporarily prohibited.

Kalmarsund and Öregrundsgrepen: Transit traffic for low powered vessels is not recommended.

The traffic separation schemes in the Quark are temporarily out of use from 20 December due to ice conditions.

Vessels bound for Gulf of Bothnia ports in which assistance restrictions apply, shall when passing latitude 60° 00' N report their nationality, name, destination, ETA and speed to ICE INFO on VHF channel 82. This report can also be given directly by telephone to +46 10 492 7600.

Vessels bound for Finnish or Swedish ports with assistance restrictions in the Quark or the Bay of Bothnia shall, 20 nautical miles before Nordvalen Lighthouse (63° 32.15' N 20° 46.60' E), report in accordance with the instructions for winter navigation to Bothnia VTS on VHF channel 67.

**Icebreakers:** YMER, ODEN, FREJ, POLARIS, SISU and URHO assist in the Bay of Bothnia. ATLE, KON-TIO and OTSO assist in the southern Bay of Bothnia and in the Quark. ZEUS, CALYPSO, BALTICA and BRAGE VIKING assist in the Sea of Bothnia. VOIMA, FENNICA and NORDICA assist the Gulf of Finland. ALE and **SCANDICA** assists in the Vänern.

### Norway

Mossesundet (Moss): Icebreaker assistance can only be given to vessels of special ice class and of special size. (05.01.24)

Kilsfjorden (Kragerø) and Hellefjorden (Kragerø): Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size. (08.01.24)

### Russia

There are restrictions for small crafts going to St. Petersburg, Vyborg, Vysotsk, Primorsk and Ust-Luga. Barge towed by tug not allowed to navigate in ice.

**Icebreakers:** Several icebreakers assist vessels to the port of St. Petersburg, Vyborg, Vysotsk, Primorsk and Ust-Luga.

### Baltic Sea Ice Code

<p>First number:  <b>A<sub>B</sub> Amount and arrangements of sea ice</b>            0 Ice free            1 Open water – concentration less than 1/10            2 Very open ice - concentration 1/10 to 3/10            3 Open ice – concentration 4/10 to 6/10            4 Close ice – concentration 7/10 to 8/10            5 Very close ice – concentration 9/10 to 9+/10            6 Compact ice, including consolidated ice – concentration 10/10            7 Fast ice with drift ice outside            8 Fast ice            9 Lead in very close or compact drift ice or along the fast ice edge            / Unable to report</p> <p>Third number:  <b>T<sub>B</sub> Topography or form of ice</b>            0 Pancake ice, ice cakes, brash ice – less than 20 m across            1 Small ice floes – 20 to 100 m across            2 Medium ice floes – 100 to 500 m            3 Big ice foes – 500 to 2000 m across            4 Vast or giant ice floes – more than 2000 m across – or level ice            5 Rafted ice            6 Compact slush or shuga, or compacted brash ice            7 Hummocked or ridged ice            8 Thaw holes or many puddles on the ice            9 Rotten ice            / No information or unable to report</p>	<p>Second number:  <b>S<sub>B</sub> Stage of ice development</b>            0 New ice or dark nilas (less than 5 cm thick)            1 Light nilas (5 - 10 cm thick) or ice rind            2 Grey ice (10 - 15 cm thick)            3 Grey-white ice (15 - 30 cm thick)            4 White ice, first stage (30 - 50 cm thick)            5 White ice, second stage (50 - 70 cm thick)            6 Medium first year ice (70 - 120 cm thick)            7 Ice predominantly thinner than 15 cm with some thicker ice            8 Ice predominantly grey-white ice (15 – 30 cm) with some thicker ice            9 Ice predominantly thicker than 30 cm with some thinner ice            / No information or unable to report</p> <p>Fourth number:  <b>K<sub>B</sub> Navigation conditions in ice</b>            0 Navigation unobscured            1 Navigation difficult or dangerous for wooden vessels without ice sheathing            2 Navigation difficult for unstrengthened or low-powered vessels built of iron or steel. Navigation for wooden vessels even with ice sheathing not advisable            3 Navigation without icebreaker assistance possible only for high-powered vessels of strong construction and suitable for navigation in ice            4 Navigation proceeds in lead or broken ice-channel without the assistance of an icebreaker            5 Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size            6 Icebreaker assistance can only be given to vessels of special ice class and of special size            7 Icebreaker assistance can only be given to vessels after special permission            8 Navigation temporarily closed            9 Navigation has ceased            / Unknown</p>
