Übersicht

In der Bottenwiek befindet sich in den Schären morsches oder morsch werdendes Festeis, im Norden bis 70 cm dick. Auf See treibt im westlichen Teil 20–70 cm dickes, sehr dichtes, örtlich aufgepresstes Eis. Im Südwesten treibt sehr lockeres bis dichtes, 15–50 cm dickes Eis. Im gesamten östlichen Teil kommt offenes Wasser mit vereinzelt, dickeren Treibeisschollen vor. An den Küsten von Norra Kvarken liegt morsches Festeis und auf See kommt meist offenes Wasser vor. An den Küsten der nördlichen Bottensee kommt örtlich noch morsches Eis vor.

Overview

In the Bay of Bothnia there is rotten or rotting fast ice in the archipelagos, up to 70 cm thick in the north. At sea in the western part there is 20–70 cm thick, very close, ridged ice. In the southwestern part there is very open to close, 15–50 cm thick drift ice. At sea in the east there is open water with thicker floes at places. In the Quark there is rotten fast ice at the coasts and at sea mostly open water. Some rotten ice is still present at the coasts of the northern Sea of Bothnia.

Bay of Bothnia

In the northern archipelagos there is 40–70 cm thick rotting fast ice or consolidated ice. In the northeast the fast ice stretches out to Malören, Kemi-1, Oulun portti and Raahe lighthouse. In the southern archipelagos there is rotten ice. West of about 22°30'E there is mostly 20–60cm thick, ridged, very close ice reaching the Swedish coast. There are some thicker floes, cracks and areas of lower concentration in the field. Open water is pre-

sent from around Nygrån to Norströmsgrund and north of Simpgrundet there is a vast floe of 60–90 cm thick, ridged ice. In the southwest there is mainly 15–50 cm thick, very open to close ice. At sea in the east there is mostly open water with some thicker floes.

With day temperatures above 0°C some ice melt is expected with a southward ice drift.

The Quark

Along the Swedish coast and in the Vaasa archipelago there is rotten ice in places. At sea mostly open water but northeast of Holmöarna there is

very open to close, 10–50cm thick ice.

With temperatures above 0°C ice melt is expected.

Sea of Bothnia

In the northwestern archipelagos there is rotten ice in places. On Ångermanälven is rotten ice.

Further ice melt is expected.

Lake Saimaa

In Lake Saimaa there is mainly open water with rotten ice at some places. Further ice melt is expected.

Finland/Sweden

The traffic separation schemes in the Quark are temporarily out of use from 20 December due to ice conditions.

Vessels bound for Gulf of Bothnia ports in which assistance restrictions apply, shall when passing latitude 60° 00' N report their nationality, name, destination, ETA and speed to ICE INFO on VHF channel 82. This report can also be given directly by telephone to +46 10 492 7600.

Vessels bound for Finnish or Swedish ports with assistance restrictions in the Quark or the Bay of Bothnia shall, 20 nautical miles before Nordvalen Lighthouse (63° 32.15' N 20° 46.60' E), report in accordance with the instructions for winter navigation to Bothnia VTS on VHF channel 67.

Icebreakers: YMER, ALE, FREJ, POLARIS, OTSO and URHO assist in the Bay of Bothnia. TYRSKY assists in the Lake Saimaa.

Baltic Sea Ice Code

First number: A_B Amount and arrangements of sea ice 0 Ice free 1 Open water – concentration less than 1/10 2 Very open ice - concentration 1/10 to 3/10 3 Open ice – concentration 4/10 to 6/10 4 Close ice – concentration 7/10 to 8/10 5 Very close ice – concentration 9/10 to 9+/10 6 Compact ice, including consolidated ice – concentration 10/10 7 Fast ice with drift ice outside 8 Fast ice 9 Lead in very close or compact drift ice or along the fast ice edge / Unable to report Third number: T_B Topography or form of ice 0 Pancake ice, ice cakes, brash ice – less than 20 m across 1 Small ice floes – 20 to 100 m across 2 Medium ice floes – 100 to 500 m 3 Big ice floes – 500 to 2000 m across 4 Vast or giant ice floes – more than 2000 m across – or level ice 5 Rafted ice 6 Compact slush or shuga, or compacted brash ice 7 Hummocked or ridged ice 8 Thaw holes or many puddles on the ice 9 Rotten ice / No information or unable to report	Second number: S_B Stage of ice development 0 New ice or dark nilas (less than 5 cm thick) 1 Light nilas (5 - 10 cm thick) or ice rind 2 Grey ice (10 - 15 cm thick) 3 Grey-white ice (15 - 30 cm thick) 4 White ice, first stage (30 - 50 cm thick) 5 White ice, second stage (50 - 70 cm thick) 6 Medium first year ice (70 - 120 cm thick) 7 Ice predominantly thinner than 15 cm with some thicker ice 8 Ice predominantly grey-white ice (15 – 30 cm) with some thicker ice 9 Ice predominantly thicker than 30 cm with some thinner ice / No information or unable to report Fourth number: K_B Navigation conditions in ice 0 Navigation unobscured 1 Navigation difficult or dangerous for wooden vessels without ice sheathing 2 Navigation difficult for unstrengthened or low-powered vessels built of iron or steel. Navigation for wooden vessels even with ice sheathing not advisable 3 Navigation without icebreaker assistance possible only for high-powered vessels of strong construction and suitable for navigation in ice 4 Navigation proceeds in lead or broken ice-channel without the assistance of an icebreaker 5 Icebreaker assistance can only be given to vessels suitable for navigation in ice and of special size 6 Icebreaker assistance can only be given to vessels of special ice class and of special size 7 Icebreaker assistance can only be given to vessels after special permission 8 Navigation temporarily closed 9 Navigation has ceased / Unknown
