

German Ice Report - No. 04
2025-02-22

BB 11000
CC 11000
DD 10//0

North Sea coast

The North Sea is ice-free.

Western Baltic Sea

In sheltered areas east of Travemünde and the western Schlei melting ice may be found. In the Bodden waters south of Darss and Zingst and in sheltered places around Ruegen there is melting ice.

Southern Baltic Sea

On the Peenestrom there is thin ice with varying concentration. In the western part of the Szczecin Lagoon, there is close to very close ice in the north and open water in the south.

Outlook

Ice melt will continue the coming days. In the eastern part some ice remnants may stay over the weekend. With mostly southerly winds, the ice in the western part of the Szczecin Lagoon will stay along the northern shore.

This is the last German Ice Report for the moment.
